## DRILL STAND FOR THE BANTAM WELD GUN

The heavy duty Cutlass drill stand is designed specifically for the Bantam stud welding gun. It will accept either of the CD welding guns, C8 or C10, or the A-58 ARC welding gun.

The drill stand is an ideal low cost method of semi-automating repetitive stud welding tasks. With a simple fixture attached to the drill stand base, stud perpendicularity is ensured and precise stud location can be achieved consistently and operator error can be minimized.

The drill stand has an adjustable column so the distance from the gun to the workpiece can be set to match the stud length and fixture height. An adjustable depth stop ensures consistent protrusion and compression of the gun spring.
